

As an added convenience to our valued customers, we use a prescription container that allows you – the customer – to change the cap from a “child resistant” function to an “easy open” (non-child resistant) function. Simply push and turn to remove the cap one time, turn it over, and thread the cap back into the mouth of the vial.

Unless otherwise specified, federal law requires the pharmacy to dispense prescriptions with the cap in the “child resistant” position.

**Want to receive your prescription in the easy-open position?  
Simply tell a pharmacy staff member and we will make a note  
in your profile to ensure this happens!**

\*Remember, all prescription containers are “child **RESISTANT**” – not “child **PROOF**”, and once you convert the cap, it is now easy for kids to open, too. So please keep all containers out of the reach of children, and if you have young children in your household, **DO NOT CONVERT THE CAP – LEAVE IT CHILD RESISTANT.** If you have any questions about this information, please feel free to speak with a pharmacy staff member.
